Vol. 001 | 2026-05-31 07:00 WIB

Top 5 Highlights

- Palo Alto GlobalProtect VPN auth bypass flaw now exploited in attacks
- Exploit Code Published for Critical Flowise RCE Vulnerability
- New CIFSswitch Linux flaw gives root on multiple distributions
- PAN-OS GlobalProtect Authentication Bypass (CVE-2026-0257) Under Active Exploitation
- Russia-aligned crime group Greyvibe extensively uses AI in attacks

Threat Intelligence (10)

01. Russia-aligned crime group Greyvibe extensively uses AI in attacks

Researchers have uncovered a previously undocumented Russian group that makes extensive use of large language models (LLMs) in its attacks against private, government, and military organizations in Ukraine. It uses a variety of attack vectors along with custom malware, with the goal of intelligence gathering for the ongoing war. Dubbed Greyvibe by researche...

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Tighten email authentication and filtering, run targeted user awareness, and monitor for lookalike domains and suspicious inbox rules.

Sources: <https://www.csoononline.com/article/4178879/russia-aligned-crime-group-greyvibe-extensively-uses-ai-in-attacks.html>

02. Malicious npm packages abuse dependency confusion to profile developer environments

A dependency confusion campaign leveraged 33 malicious npm packages to collect reconnaissance data from developer and build environments. This report details the attack chain, observed tradecraft, and detection opportunities to help organizations identify and disrupt related activity. The post Malicious npm packages abuse dependency confusion to profile dev...

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.microsoft.com/en-us/security/blog/2026/05/29/33-malicious-npm-packages-abuse-dependency-confusion-profile-developer-environments/>

03. [+24h Old] Name That Toon: Mark of (Cybersecurity) Progress

As part of Dark Reading's 20th anniversary package, we asked readers for a cybersecurity-related caption that captures their thoughts about the industry's last two decades.

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.darkreading.com/cloud-security/name-that-toon-mark-of-cybersecurity-progress>

04. [+24h Old] ChatGPT share links abused to host fake outage pages to deliver malware

Threat actors are abusing ChatGPT's content-sharing feature to display fake OpenAI outage pages that direct users to download malware disguised as the ChatGPT desktop application. [...]

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.bleepingcomputer.com/news/security/chatgpt-share-links-abused-to-host-fake-outage-pages-to-deliver-malware/>

05. [+24h Old] Zapier security flaws could have exposed millions of user accounts

The flaws, disclosed by Token Security, did not require malware or insider access, only a free Zapier account.

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources:

<https://www.scworld.com/brief/zapier-security-flaws-could-have-exposed-millions-of-user-accounts>

06. [+24h Old] In Other News: Trump Mobile Data Breach, FIFA World Cup Phishing, CISA Responds to Supply Chain Attacks

Noteworthy stories that might have slipped under the radar: Trump Mobile exposes customer data, phishers target the 2026 FIFA World Cup, CISA responds to recent supply chain attacks. The post In Other News: Trump Mobile Data Breach, FIFA World Cup Phishing, CISA Responds to Supply Chain Attacks appeared first on SecurityWeek .

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Audit build pipelines, rotate CI/CD secrets, enforce package integrity controls, and review developer workstation hardening.

Sources: <https://www.securityweek.com/in-other-news-trump-mobile-data-breach-fifa-world-cup-phishing-cisa-responds-to-supply-chain-attacks/>

07. [+24h Old] The Good, the Bad and the Ugly in Cybersecurity - Week 22

Authorities dismantle Russian-aligned hosting firm, FBI warns of in-person data thefts, and TrapDoor steals credentials via software supply chain attack.

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Audit build pipelines, rotate CI/CD secrets, enforce package integrity controls, and review developer workstation hardening.

Sources: <https://www.sentinelone.com/blog/the-good-the-bad-and-the-ugly-in-cybersecurity-week-22-7/>

08. [+24h Old] From \$5 Attacks to Botnet-Powered Platforms: Inside the DDoS-as-a- Service Market

DDoS attacks are increasingly being sold like subscription services, complete with pricing tiers, support, and reseller programs. Flare explores how the DDoS-as-a-Service market

has evolved from scattered tools into polished attack platforms. [...]

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.bleepingcomputer.com/news/security/from-5-attacks-to-botnet-powered-platforms-inside-the-ddos-as-a-service-market/>

09. [+24h Old] Dutch govt disrupts malware botnet with 17 million infected devices

Dutch authorities have taken offline a massive botnet of 17 million devices and seized more than 200 servers at a local provider that supported the operation. [...]

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.bleepingcomputer.com/news/security/dutch-govt-disrupts-malware-botnet-with-17-million-infected-devices/>

10. [+24h Old] Dutch cops wrest 17M devices from mystery botnet's clutches

Hosting provider pulled the plug after police traced 200 servers to the Netherlands

Why it matters: Threat-actor tradecraft and active campaigns help defenders anticipate techniques likely to be used against their environment.

Recommendation: Update detections and threat hunts using reported TTPs/IOCs, review email/web controls, and harden high-risk internet-facing services.

Sources: <https://www.theregister.com/security/2026/05/29/dutch-cops-liberate-17m-devices-from-botnet-s-clutches/5248312>

Latest Vulnerabilities (10)

01. Palo Alto GlobalProtect VPN auth bypass flaw now exploited in attacks

Palo Alto Networks is warning that hackers are now exploiting a PAN-OS GlobalProtect authentication bypass flaw, tracked as CVE-2026-0257, in attacks attempting to breach corporate networks. [...]

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.bleepingcomputer.com/news/security/palo-alto-globalprotect-vpn-auth-bypass-flaw-now-exploited-in-attacks/>

02. Exploit Code Published for Critical Flowise RCE Vulnerability

The one-click vulnerability allows attackers to execute arbitrary code on self-hosted Flowise servers by tricking users into importing a malicious chatflow. The post [Exploit Code Published for Critical Flowise RCE Vulnerability](#) appeared first on SecurityWeek .

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.securityweek.com/exploit-code-published-for-critical-flowise-rce-vulnerability/>

03. New CIFSswitch Linux flaw gives root on multiple distributions

A newly discovered local privilege escalation vulnerability dubbed 'CIFSswitch' in the Linux kernel could allow attackers to forge CIFS authentication key descriptions, abuse the kernel's key request mechanism, and gain root privileges. [...]

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.bleepingcomputer.com/news/security/new-cifswitch-linux-flaw-gives-root-on-multiple-distributions/>

04. PAN-OS GlobalProtect Authentication Bypass (CVE-2026-0257) Under Active Exploitation

Palo Alto Networks has warned that a recently disclosed medium-severity security flaw impacting PAN-OS and Prisma Access has come under active exploitation in the wild. The vulnerability, tracked as CVE-2026-0257 (CVSS score: 7.8), refers to a case of authentication bypass that could be exploited by bad actors to set up VPN connections. "Authentication bypa...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://thehackernews.com/2026/05/pan-os-globalprotect-authentication.html>

05. [+24h Old] Microsoft and security researcher's dueling posts about cybersecurity disclosures get nasty

Microsoft and a prominent cybersecurity researcher have gotten into a very public and rather personal exchange of unpleasantries about what responsible cybersecurity disclosures should mean in 2026. A cybersecurity researcher going by the name Nightmare Eclipse, who has disclosed several cybersecurity holes before patches were available, posted that he had...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.csoonline.com/article/4178869/microsoft-and-security-researchers-dueling-posts-about-cybersecurity-disclosures-get-nasty.html>

06. [+24h Old] No fix yet for critical RCE bug in open-source Git service Gogs - exploit module is out

Researcher reported the vuln in March. Maintainers haven't responded to his messages since

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.theregister.com/security/2026/05/29/no-fix-yet-for-critical-gogs-rce-bug-exploit-module-is-out/5248691>

07. [+24h Old] ChatGPhish Vulnerability Turns ChatGPT Web Summaries Into a Phishing Surface

Cybersecurity researchers have disclosed details of a vulnerability in OpenAI ChatGPT that leverages the artificial intelligence (AI) assistant's implicit trust in Markdown links and images to trigger prompt injections and open the door to phishing attacks. The technique has been codenamed ChatGPhish by Permiso Security. "The chatgpt.com response renderer t...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://thehackernews.com/2026/05/chatgphish-vulnerability-turns-chatgpt.html>

08. [+24h Old] Certifiably random: Swiss researchers claim perfect random number source

Researchers in Switzerland claim to have built a perfect random number generator from two quantum superconducting chips, a 30-meter-long pipe, and some software. The resulting device could be used to generate cryptographic keys, or to offer a "public randomness service" for lotteries or blockchain applications, they say. They're not the first to make the cl...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.csoonline.com/article/4178750/certifiably-random-swiss-researchers-claim-perfect-random-number-source.html>

09. [+24h Old] Attackers Use LLM Agent for Post-Exploitation After Marimo CVE-2026-39987 Exploit

An unknown threat actor has been observed using a large language model (LLM) agent to conduct post-compromise actions after obtaining initial access following the exploitation

of a publicly-accessible Marimo network using a recently disclosed vulnerability. "The attacker compromised an internet-reachable Marimo notebook via CVE-2026-39987, extracted two clo...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://thehackernews.com/2026/05/attackers-use-llm-agent-for-post.html>

10. [+24h Old] Dutch police disrupts botnet composed of 17 million devices

The Dutch National Police and the country's National Cyber Security Center (NCSC) have taken offline 200 servers controlling a botnet of 17 million devices, the law enforcement agency announced on Thursday. The investigation was launched after the NCSC received a report by a security researcher, and showed that the botnet consisted of at least 17 million in...

Why it matters: Exploit-ready vulnerabilities can rapidly translate into compromise-especially for internet-facing services and widely deployed products.

Recommendation: Prioritize patching/mitigations, review exposure, and add detection for exploitation attempts (e.g., WAF/EDR signatures and logs).

Sources: <https://www.helpnetsecurity.com/2026/05/29/dutch-police-disrupts-botnet-composed-of-17-million-devices/>

Data Breach & Cybercrime (10)

01. [+24h Old] California AG sues 23andMe over 2023 breach exposing health data

California Attorney General Rob Bonta filed a lawsuit against 23andMe, now Chrome Holding Co., over the company's failure to protect sensitive customer genetic and personal information. [...]

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.bleepingcomputer.com/news/security/california-ag-sues-23andme-over-2023-breach-exposing-health-data/>

02. [+24h Old] 23andMe inherits lawsuit over 'disturbing' DNA data breach

California AG claims genetics biz downplayed 2023 mega-leak while paying ransom to attacker

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.theregister.com/legal/2026/05/29/rob-bonta-sues-23andmes-new-owners-over-2023-breach/5248565>

03. [+24h Old] Charter Communications Data Breach Could Impact Nearly 5 Million

The notorious ShinyHunters extortion group leaked over 42 million records allegedly stolen from Charter in April. The post Charter Communications Data Breach Could Impact Nearly 5 Million appeared first on SecurityWeek .

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources:

<https://www.securityweek.com/charters-communications-data-breach-could-impact-nearly-5-million/>

04. [+24h Old] Silent Ransom Group Uses In-Person IT Impersonation to Breach Systems

Threat actors from the Silent Ransom Group, aka Luna Moth, are escalating attacks by impersonating IT staff in phone calls and even showing up in person to gain direct access to victim systems

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.infosecurity-magazine.com/news/silent-ransom-group-it/>

05. [+24h Old] California Sues 23andMe, Alleging It Failed to Protect User Data in 2023 Breach

Attorney General Rob Bonta filed the lawsuit against Chrome Holding Co., which 23andMe rebranded under after filing for bankruptcy last March. The post California Sues 23andMe, Alleging It Failed to Protect User Data in 2023 Breach appeared first on SecurityWeek .

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.securityweek.com/california-sues-23andme-alleging-it-failed-to-protect-user-data-in-2023-breach/>

06. [+24h Old] Man sent to prison for selling data of 7 millions elderly Americans

A North Carolina man was sentenced to more than 10 years in prison for selling the personal information of over 7 million elderly Americans to Jamaican scammers. [...]

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.bleepingcomputer.com/news/security/man-sent-to-prison-for-selling-data-of-7-millions-elderly-americans/>

07. [+24h Old] ShinyHunters adds Charter to trophy shelf after 4.9M customer records leak

Telco giant says no sensitive data was taken, though names, addresses, phones, and emails are now out there

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.theregister.com/cyber-crime/2026/05/29/shinyhunters-adds-charter-to-trophy-shelf-after-49m-customer-records-leak/5248281>

08. [+24h Old] Charter Communications data breach affects 4.9 million accounts

The ShinyHunters extortion gang stole personal information from 4.9 million accounts after hacking the U.S. telecom giant Charter Communications in early April, according to data breach notification service Have I Been Pwned. [...]

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.bleepingcomputer.com/news/security/charter-communications-data-breach-affects-49-million-accounts/>

09. [+24h Old] Humanix expands detection to identify live violations of security procedures

Humanix has announced a capability to identify live violations of organization-defined procedures governing IT support workflows. Designed to prevent unauthorized access, these procedures typically require help desk and service desk agents to follow identity verification steps before fulfilling sensitive requests, such as credential resets. Attackers have l...

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.helpnetsecurity.com/2026/05/29/humanix-violations-detection/>

10. [+48h Old] FBI warns of fake FIFA websites running World Cup fraud schemes

The FBI is warning of fake websites impersonating FIFA ahead of the 2026 World Cup, to steal personal and financial information, sell fake tickets and hospitality packages, and push other fraud related to the event. [...]

Why it matters: Breaches and cybercrime activity signal where attackers are focusing and what data types are actively monetized.

Recommendation: Validate incident-response readiness, monitor for exposed credentials, and reinforce MFA, phishing resistance, and data-loss controls.

Sources: <https://www.bleepingcomputer.com/news/security/fbi-warns-of-fake-fifa-websites-running-world-cup-fraud-schemes/>
